

FIG. 1 is a block diagram of a videoconferencing system 10. The system 10 includes a central Video Switch 102, a Multiview Device 104, a VCR 108, a Monitor 107, and a Data Server 150. The Video Switch 102 is connected to a Video Workstation 120, a Modem 110, and a Modem 110. The Video Workstation 120 is connected to a Monitor 106. The Modem 110 is connected to a Modem 110. The Data Server 150 is connected to the Video Switch 102. The system 10 is connected to a Network 190 via a Codec 170. The Network 190 is connected to a Remote Workstation 130 and a Videoconferencing System 112.

FIG. 4 is a block diagram of a system for providing a secure communication link between two sites, Site 1 and Site 2. The system includes a Data Server 150, a LAN Switch 210, a Modem 220, a Fiber Optic Line, a Switch 102, a Matrix Switcher 240, a Workstation 130, a Decoder 175, a Modem 222, a Transmitter 260, and a Data Splitter Unit 250. The system is configured to provide a secure communication link between Site 1 and Site 2.

Fig. 4

FIG. 5 is a block diagram of a system for providing a secure communication link between two centers, Center 1 and Center 2, using fiber optic lines and a secure communication protocol.
